Risk and Reward Profile

- This is based on historical data and thus may not be a reliable indication for the future risk profile of the Fund.
- The indicated risk category is not a target or a guarantee and may change over time.
- The lowest category does not mean ‘risk free’.
- The Fund is classified in category 5 due to volatility in the share prices of the Fund’s investments.

In addition to the risks captured by the indicator, the overall fund value may be affected by the following material risks:

Market Risk: Some of the markets in which the Fund may invest may be less well-regulated, insufficiently liquid, or highly volatile from time to time.

Derivatives Risk: The prices of derivative instruments, including futures and options prices, can be highly volatile.

Liquidity Risk: Not all securities or instruments invested in by the Fund will be listed or rated. Consequently, liquidity may be low.

Exchange Control and Repatriation Risk: It may not be possible to repatriate capital, dividends, interest and other income from certain countries, or may require government consents to do so.

Emerging Markets Risk: Investment in equity securities of companies in emerging markets may involve a high degree of risk and may be considered speculative.

Market Capitalisation Risk: The securities of companies with smaller market values or related financial instruments may have a more limited market than the securities of larger companies and may be more volatile and difficult to sell at an advantageous price if the market drops.

Currency Risk: Assets may be denominated in a currency other than the base currency of the Fund. Changes in the exchange rate between the base currency and the currency of the asset may reduce the value of the Fund’s assets.

Credit Risk: Issuers of securities or other instruments may be subject to credit difficulties leading to the loss of some or all of the sums invested.

Please see the section entitled “Risk Factors” in the Prospectus for a full list of risks.
